DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bourgoyne Jr. et al (pp 8-12, Applied Drilling Engineering, 1986) . The drilling line is subject to rather severe service during operation, and failure of the drilling line can result in not only the loss of the drilling tools but also injury to the drilling personell and damage to the rig as well p10, col. 2, paragraph 2). Bourgoyne Jr. et al discloses an API slip-and-cut program for drilling lines, in which the parameter adapted to evaluate the amount of line service is the ton-mile. Drilling line is maintained in its good condition or integrity by following a scheduled slip-and-cut program in which a section of line is cut off at its end. The number of ton-miles between cutoffs varies with drilling conditions and drilling line diameters which id determined by field experience, as drilling line does not tend to wear uniformly over its length. It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to have conducted scheduled maintenance inspection of the integrity of the drilling line to establish a standard for the slip-and-cut program so that the drilling line can be maintained at a safe condtion.

Allowable Subject Matter

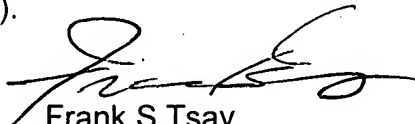

Claims 8-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Walsh et al, Striffler, and Allan et al all teach cable integrity testings.
